0.5mm Flex Connectors “Flip-Lock” SMT/ZIF Type Flexible Printed Circuit Board Connectors

The FH12 Series of miniature connectors for FPC/FFC use brings form to the newly developed “flip-lock” concept and can be used with SMT (surface mount technology) to eliminate the problems of the contemporary slide-lock system. These connectors have a contact spacing of 0.5mm, are suited to high density mounting, and are based on a single-action ZIF (zero insertion force) structure for easy connections. Types with top or bottom contacts, and vertical mounting are available to suit your applications.

Materials/Finish: • **Insulation**: Polyimide Resin, beige; PPS Resin, dark brown (UL94V-0) • **Contacts**: Phosphor Bronze, solder plating

Electrical: • **Rated Current**: 0.4A • **Insulation Resistance**: 500MΩ or greater at 100V DC • **Withstand Voltage**: 150V AC for one minute • **Contact Resistance**: 50mΩ or less *(Note: When all conductors are to continuously carry the rated current, set the current to 70% of the rated current value.)*

HIROSE ELECTRIC CO.,LTD.

FX10A Series - Surface Mount

0.5mm Conn. with Ground Plate for Board-to-Board Connectors

Features: Transmission characteristics have been improved through a design that fixes ground plates to both sides of the header and receptacle.

Signal and ground are arranged in a ratio of 10:1 with the ground plate SMT connected to the board. The ground stability achieved serves to reduce noise. Suited to high-density applications. The single contact pitch of 0.5mm produces a smaller connector utilizing less board area for mounting. Board-to-Board dimensions of 4mm and 5mm are available.

Materials: • Insulator: LCP resin, Beige, UL94V-0 • Contacts: Phosphor bronze • Header Engagement Area: Gold plating of 0.1µm • Termination Area: Solder plating • Receptacle Engagement Area: Gold plating of 0.1m • Termination Area: Flash plating Ground plate: Phosphor bronze, solder plating • Reinforced fitting: Phosphor bronze, Tin plating

Electrical: • Rated current: 0.3A • Operating temp.: range -55 to +85°C • Rated voltage: 50 V AC • Operating humidity range: Relative humidity 95% or less (No condensation)

Note: The thickness of the solder paste is not included in the stack height.

FX11L Series -Surface Mount

0.5mm Conn. with Ground Plate for2mm Board-to-Board Connections

Features: Low Profile Design. The board-to-board mating height of 2mm suits smaller, thinner case designs. Improved transmission efficiency between boards. Transmission characteristics have been improved through a design that fixes ground plates to both sides of the header and receptacle. Signal and ground are arranged in a ratio of 10:1 with the ground plate SMT connected to the board. The ground stability achieved serves to reduce noise. Suited to High-Density Applications. The signal contact pitch of 0.5mm produces a smaller connector utilizing less board area for mounting.

Applications: Notebook computers, PDA, and other miniature electronic equipment.

Material: • Insulator: LCP resin, Beige, UL94V-0 • Contacts: Copper alloy • Header: Phosphor bronze • Receptacle: Engagement area: Gold plating of 0.1 µm Termination Area: Flash plating Ground plate: Phosphor bronze solder plating • Reinforced fitting/plate: Phosphor bronze, Tin plating

Electrical: • Rated current: 0.3 A, operating temperature range -55 to 80°C • Rated voltage: 50 V AC • Operating humidity range: Relative humidity 95% or less (No condensation)

Connectors – QR/P1 Series

QR/P1 series connectors are small and compact high 8, 12, 16, 24 and 32 way. Crimp terminals assure density versions of original OR/P series. Available in positive and reliable termination with minimum labor.

Features: • The coupling mechanism assures stable and reliable contact pressure through point and blade contact, in addition to smooth coupling that is sufficiently capable of dealing with variations in the coupling length specific to the plug-in connection. • One opposed pair (in 12 contacts), 2 pairs (in 8, 16, and 24 contacts), and 3 pairs (in 32 contacts) can be used as power supply contacts. They are spaced further apart than the others so as to have enough creeping distance to withstand a high voltage. Fire-retardant insulation materials (UL94-0) are used. • The Guide Pin is made of steel nickel plated to be strong enough against accidental coupling shock. • The mount of a receptacle housing is done through floating bushes. Thus, they may help to give more smooth coupling of connectors by self-adjusting function.

Specifications: • Operating Temp. Range: -10°C to +60°C • **Voltage**: *Power Terminal*: AC 250V; *Signal Terminal:* AC 125V • **Current**: *Power Unit*: 13A max. (AWG 14 use); *Signal Unit*: 3A • **Withstand Voltage**: *Power Terminal*: AC 1000V; *Signal Terminal*: AC 500V • **Insulation Resistance**: 5000M Ω higher at DC 500V • **Contact Resistance**: *Power Unit*: 10m Ω or less at DC1A; *Signal Unit*: 15m Ω or less at DC1A • **Material**: *Insulator*: Polyethylene terephtalate, black; *Terminal*: Phosphor bronze, selective gold plating with nickel underplating

Connectors – QR/P8 Series

QR/P8 series is a series of small connectors for rack and panel application. This is a smaller rectangular size version of the QR/P and QR/P1 series. Electrodes available are 8, 12 and 20. Wires are connected to the connectors without solder for easier connection and higher reliability.

Features: • The connector of this series is about 20% smaller in length than that of the QR/P4 series with the same number of electrodes. • Wires of AWG 20-28 can be connected with the two pairs of terminals on the two sides, while wires of AWG 24-28 can be connected with the terminals for signals. • The pins give stable contact pressure because of their point contact with the receptacle blades, and have a larger allowance for the variation of connection length. • The connectors have passed UL, CSA and TUV standards.

Application: • PPC • Transmission, automation, reception and data communication equipment • Vending machines • Measuring instruments • Switchboards

Specifications: • **Operating Temp.:** -10°C to 60°C • **Withstand Voltage** (for 1 min.): *Power Supply*: AC 2000V; *Signal Unit*: AC 500V • **Insulation Resistance:** 1000M Ω or less at DC 500V • **Contact Resistance:** 30m Ω or less at DC1A • **Material:** *Insulator:* Polycarbonate resin UL94V-0, Black; *Contact:* Phosphor bronze, selective gold plated over nickel

EH 2.5mm Disconnectable Crimp Style Connectors

Features: Compact and Slim: This connector is designed to be compact and unusually thin. It measures only 8.1mm (.319") high after mounting and is just 3.8mm (.150") wide. **Highly Reliable Contact:** The contact has long dimples near the center that ensure continuity of low voltage and low current circuits at all times, even under conditions of vibration and abusive prying. **Polarizing Guides:** The header and housing have guides to prevent improper mating. **Whisker Prevention:** The contact material is treated with a reflow process, and the square post is copper-undercoated and tin/lead-plated for whisker prevention. **Easy and Effective Crimping:** Although the contact is compact, it has a long wire strip length, 2.6 ± 0.4mm (.102" ± .016"). This long length is very useful for automatic crimping and when crimping shielded wires.

Specifications: Current Rating: 3A AC, DC (AWG 22). **Voltage Rating:** 250V AC, DC. **Temp. Range:** -25°C to +85°C.

Material and Finish: Contact: Phosphor bronze, tin-plated; Housing: Nylon 66, UL94V-0, natural (white); Posts for Headers: Brass, copper-undercoated, tin/lead plated; Wafer: Nylon 66, UL94V-0, natural (white).

Applicable Wire: AWG 32 to 22. **Applicable PC Board Thickness:** 0.8 to 1.6mm (.031" to .063").

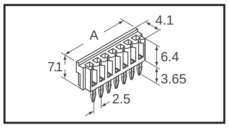
DB 2.5mm Board-In IDC Connectors



Features: Compact and Low Profile: This is a low profile connector with a mounting height of 7.1mm (.280") and a width of 4.1mm (.161"). **Twin U-Slot Insulation Displacement Section:** The insulation displacement section connected to the wire consists of two tin-plated slots (twin U-slot) for superb reliability. **Locking Solder Tail:** The contact's compliant solder tail has two locking positions, both of which ensure stable connection once inserted into a printed circuit board. This makes insertion into printed circuit boards easy and reliable. **Strain Relief:** The strain relief feature prevents stress due to vibration, impact or bending from effecting the insulation displacement connection. This is accomplished by holding the outside of the wire with the insulation gripping device on the housing.

Specifications: Current Rating: 2A AC, DC (AWG 24). **Voltage Rating:** 250V AC, DC. **Temp. Range:** -25°C to +85°C.

Material and Finish: Contact: Phosphor bronze, copper-undercoated, tin/lead-plated; Housing: Nylon 66, UL94V-0.

Applicable Wire: UL1007 (Contact JST for details regarding other UL wires.) AWG 28, 26, 24. Conductor/7 strands, tin-coated. Insulation O.D/1.0 to 1.4mm (.039" to .055"). **Applicable PC Board Thickness:** 1.6mm (.063")

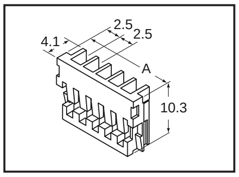
HR 2.5mm IDC Receptacles

TÜV



Features: Twin U-slot Insulation Displacement Section: The insulation displacement section has reliable twin U-slots like those of JST's other insulation displacement connectors. **Ultra Thin Design:** The connector is very small, with a mounting height of 11.3mm (.445") and a width of 4.1mm (.161"). **High Reliability:** The contact has a dimple where it mates with the post to ensure a continuous gas tight connection when used for circuits requiring minute amounts of current and voltage. In addition, it is built to withstand vibration and prevent deformation. **Strain Relief:** A metallic strain relief secures the wire so as to protect the insulation displacement connection against vibration, impact and other external forces. **Interchangeability:** The shrouded header is interchangeable with the 2.5mm (.098") pitch crimp style EH connectors.

Specifications: Current Rating: 2A AC, DC (AWG 24). **Voltage Rating:** 250V AC, DC. **Temp. Range:** -25°C to +85°C.

Material and Finish: Contact: Phosphor Bronze, Tin-Plated. Housing: Nylon 66, UL94V-0.

Applicable Wire: UL1007 (Contact JST for details regarding other UL wires.) AWG 26, 24. Conductor/7 strands, tin-coated. Insulation O.D/1.0 to 1.5mm (.039" to .059"). **Applicable PC Board Thickness:** 0.8 to 1.6mm (.031" to .063").

The MicroCross DVI I/O Connectors from Molex are leading the way in support of the DDWG (Digital Display Working Group) DVI interface standard. MicroCross DVI has been chosen by the DDWG as the standard digital interface for connecting a host device and display device to support high-resolution video applications. Supporting one or two digital channels driven by TMDS (Transition Minimized Differential Signaling) and/or a high bandwidth analog interface, the MicroCross was chosen by the DDWG for its size, performance and cost. No other interface in the industry compares. The innovative crossing ground blade design and LFH™ (Low Force Helix) contact interface design provides the industry with a video interface design that will support over 1.65Gb/s per differential pair (for a total 9.9Gb/s over a dual link implementation) and 2.5GHz support for the analog interface. This provides the industry the performance head room it needs for future growth and development of video products.This innovative approach addresses the problem of an industry in transition. By providing a single high performance interface, precious board I/O space is saved and lower system costs are achieved. The interface provides added benefits of a high cycle life interface for mobile applications and the improved EMI performance needed for high speed links. The EMI performance is achieved through the 360° shielding of the MicroCross DVI cable and connector design. The MicroCross DVI connector system and the DVI standard are moving the graphics industry to the next level by providing unmatched electrical and mechanical performance while allowing for low cost implementation.

- **These Receptacles do not have mounting ears.**

(a) Electrical ratings are per circuit.

(b) Center spacing .248” (6.30mm) will accommodate: 14, 16,and 18 AWG with 1/32” (.79mm) insulation – 16 with 18 AWG (double crimp), each with 1/32” (.79mm) insulation. WM1400-WM1405 housing have positive locking rather than detent lock.

(c) 4 circuits in square grid pattern.

(d) Has positive lock rather than detent lock.

(e) Mounting ears are molded flush with back edge of wire end. Not centered on side.

Mini-Universal MATE-N-LOK® and MATE-N-LOK2® Connectors

Mini-Universal MATE-N-LOK®: Features: • Compact • Contacts are fully protected in the housings. Both pins and sockets can be used on the power supply wiring • Fully polarized to provide proper plug-to-cap mating incorporating a positive locking mechanism to prevent accidental disengagement of mated connectors. Also facilitates panel mounting • Contacts accept wire size range 30-16AWG • .163" (4.14mm) centerline spacing • Recognized under the component program of UL, Inc File No. E28476 • Certified by Canadian Standards Association File No. LR 38721 • Passed test by VDE under their Registration Number 3476/Continuous Surveillance. **Performance Characteristics:** • Dielectric Withstanding Voltage: 1.5KVAC between adjacent circuits • Insulation Resistance: 1000 megohms min. between adjacent circuits • Voltage Rating: 600V AC or DC • Contact Retention: 8lb. min. per contact • Durability: 20 cycles, mating and unmating

Mini-Universal MATE-N-LOK2®: Features: • Pins and sockets can be intermixed in the same housing although they cannot be intermixed with standard Mini Universal Mate-N-Lok® housings • Contacts accept wire size range 30-16AWG • .163" (4.14mm) centerline spacing • Recognized under the component program of UL Inc File No. E28476 **Performance Characteristics:** • Dielectric Withstanding Voltage: 1500V AC or DC between adjacent circuits at sea level • Insulation Resistance: 100 megohms minimum between adjacent circuits • Voltage Rating: 600V AC or DC • Contact Retention: 20lb. min. per contact • Durability: 25 cycles, mating and unmating • Current Rating: Up to 10.5 amps per circuit: 2 position

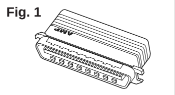
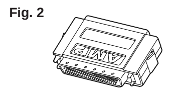
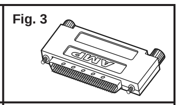
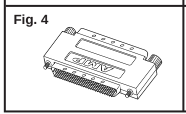
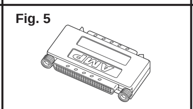
SCSI Terminators

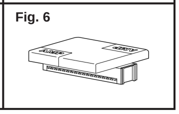












SCSI TYPES:

Single-Ended: Allows up to 5 megabytes per second **A. Passive:** 220/330Ω; for lower data transmission rates • Termination of each signal consists of 220Ω to Term Power Line and 330Ω to ground • 36 resistors • Ideal impedance match, 132Ω **B. Active:** Also referred to as "Regulated" or "Boulay." These terminators include a voltage regulator along with resistors and capacitors. They support applications requiring longer cable lengths and faster data transmission rates. • Eighteen 110Ω resistors • Three or more capacitors • Two voltage reference resistors • One voltage regulator

Differential: Allows up to 10 megabytes per second, cable lengths up to 25 meters • Requires more powerful drivers than single-ended • Ideal impedance match, 122Ω

Force Perfect: Use with near non-SCSI applications wherein the larger bandwidth and faster risetimes create special problems; compensates for variances by averaging the impedance mismatches through diode switching and biasing techniques. Circuitry: Thick film resistors and/or discreet components on aluminum substrate or plastic laminate

Active Negation: Used by SCSI-2 and SCSI-3 Drivers and Receivers in single ended active applications to help ensure clean, noise-free transitions of the signals. These terminators can source as well as sink current, thereby maintaining voltage control.

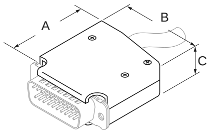
(Straight Cable Exit Shown)

Straight/90° Exit Cable Clamps can be used on a plug or receptacle and will not interfere with commonly used mating hardware. Their three-piece construction allows easy assembly to a cable harness. Also, the same cable clamp components are used for both straight and 90° cable exit applications. This is accomplished by simply positioning the Male and Female Panels on the Yoke for the desired angle. **Material:** Thermoplastic, black.

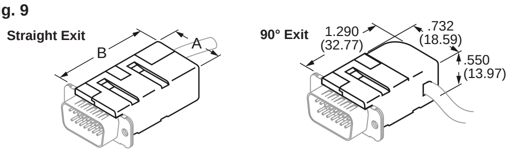
Fig. 8



Straight/45° Exit Cable Clamps can be used on either a plug or receptacle and will not interfere with commonly used hardware, such as Male Screw Retainers, Female Screw-locks or Spring Latches and Latching Blocks. Their hinged construction allows easy assembly to a harness. Also, the straight or 45° angle of the cable exit is achieved by merely positioning the Cable Support Gate for the desired angle prior to installing the assembly onto the plug or receptacle.

Material and Finish: Cable Clamp Housing: Thermoplastic, black with textured finish. **Gates:** Thermoplastic, black. **Pan Head Screw, 6-32 Set Screw and 6-32 Square Nut:** Steel, zinc plated (9 & 15 positions include self-tapping screws only).

Fig. 9



Straight Exit **90° Exit**

Low Profile Cable Clamps feature a two piece construction which allows the two cover halves to be snapped together, no hardware is required for assembly. They can be used on plugs or receptacles and will not interfere with commonly used mating hardware. Sufficient Cable Support Gates (or a Cable Support Latch) are supplied with each cable clamp kit to achieve adjustable clamping over a wide range of jacketed cable diameters. **Material:** Thermoplastic, black.

Note: To be used with HDE connectors only.

Plugs and Jacks:

SI Series: MagJack® Modular Jacks with Integrated Magnetics. The SI Series MagJack connectors offers filtering capabilities for your high-speed network and telecom applications. By integrating the magnetics into the jack body, MagJack high-speed connectors improve our signal while saving you board space.
Note: Pin without electrical connections are omitted.

30 Series: Unshielded modular plugs offer superior performance for voice, data, and high-speed networking applications.
36 Series: Shielded modular plugs provide a highly reliable connection to jacks for high-speed networking applications. Superior shielding characteristics make the 36 Series plugs ideal for environments that require protection from EMI.
Series 37: Category 5 modular plugs are designed to provide exceptional performance in high-speed communication applications. All 37 Series plugs use electropolished, 50-microinch gold-plated contacts for the most reliable, long-lasting performance.
Series 39: The high performance modular plug for cutting edge premises wiring applications.
Series 64, 65, & 70: The 64 and 70 Series jacks provide versatile and reliable right-angle solutions for your networking applications.
Series 66: Our extensive line of single-row harmonica jacks offers shielded and unshielded solutions for twisted-pair networking environments. The contacts are fully enclosed for maximum efficiency and long life.
Series 68: SOF-LOK™ posts use metal tabs to lock the jack tightly to the board with min. impact. The pogo-action contacts provide uniform pressure to the solder pads and absorb the shock of repeated mating cycles for max. durability.
Series 71: Our high-performance modular jacks are designed for fast installation into high-speed applications. The industry-standard, eight-position design is an easy drop-in replacement for Category 3 jacks.
Series 73: Enhanced shielding provides optimum protection against EMI, and our unique panel tabs provide high normal force for superior shielding effectiveness. The longer springs allow repeated insertions/withdrawals from a panel, and prevent "fish hooking" on the panel if overinserted. High-Performance StackJack connectors are designed for demanding Category 5 applications.
Series 80: The rugged design of our cable-ready jacks is ideal for telco, data, mobile, and coupling applications. Available with built-in strain relief.

The economics of using fiber-optic systems is a complex subject. Comparisons of the costs of fiber-optic systems and copper-wired systems are difficult and open to debate. Proper evaluations must be based on the users' needs.

Widespread application of fiber-optic technology will depend on its providing performance equal to or superior to copper cable, and at a lower cost. That fiber-optics can outperform cable in some areas seems established. That it can do so more cheaply, is not the rule. As with many new technologies, the prices of fiber-optic components have been dropping, often dramatically. Better products at cheaper prices have been introduced continually, and manufacturers' volume production and maturity of experience are combining to produce significant price reductions. In contrast, prices have been rising for copper cable and associated hardware. Although the point at which fiber-optic systems become less expensive than copper cable systems depends on the application, fiber-optics are becoming more attractive every day.

Users evaluating fiber-optics should consider costs beyond those for the components themselves. Considerations include the education needed to design a fiber-optic system and the costs of training craftsmen and technicians to handle, install, and maintain fiber-optic systems. On the other hand, the small size, light weight, and flexibility may present offsetting cost advantages. Handling, storage, and installation costs may be reduced.

Fiber Optic LEDs and Detectors

Fiber Optic family of low-cost, medium frequency, short distance fiber optic LEDs and photo detectors feature: • Connector-less interface • No optical design required • Simple fiber termination and connection.

Each LED and detector consists of a PBT housing, an internal active element such as an LED or photodetector, and a cinch nut to hold the fiber in place. The PBT housing retains the active element and the cinch nut while optimizing coupling between the active element and the jacketed 1000µm plastic fiber.

Shared Ratings: Maximum Ratings and Characteristics (T_A=25°C): Operating and Storage Temperature Range (T_{OP},T_{STG}): -40° to 85°C. De-rated above 25°C: 1.33mW/°C.

END PLATES:

In general end plates are used at the end of each terminal row. If different terminals of different sizes are used on 1 terminal row, end plates are also used between these different sized terminals. The overall dimension of end plates conform to the dimension of the terminal to match.

ISOLATION PARTITIONS:

When operating with cross-connections, partition plates have to be mounted between the cross-connection. This is necessary in order to follow the prescribed air and creepage distances.

SEPERATORS:

Some terminal types are used with separators when operating them with cross-connections for to follow the prescribed air and creepage distances. Seperators can be mounted subsequently between the cross-connections.

TEST-SOCKETS:

Sockets type STB are inserted in the busbar or screwed in the modular terminal in place of the terminal screw. They serve to take up the test sockets type PS.

TEST PLUGS:

Test plug type PS serve for the final testing of finished wired terminal strips.

CROSS-CONNECTION SYSTEMS:

Q - Cross connection; QI - For cross connections the cross connection bar, connection sleeve and fixing screw are already captively mounted with the corresponding number of poles.

Terminal Blocks

Micro-Pitch Terminal Blocks: The MPT 0.5 is the smallest screw terminal block available. With a micro-pitch of 2.54mm, the MPT 0.5 is ideal for high density applications.

Press Fit Terminal Blocks: The Press-Fit printed circuit board terminal block line is the perfect solution when wave soldering is not an option. The Press-Fit line is available in both fixed and pluggable styles.

Multi-Level Terminal Blocks:

With their small pitch, the two and three level MKKDS and MK3DS are ideal solutions due to the increasing packing and connection density on printed circuit boards.

Insulation Displacement Terminal Blocks:

The IDC printed circuit board terminal blocks mass terminate insulated conductors quickly without the need for tools.

ON-SHORE TECHNOLOGY, INC.

Two-Piece Terminal Blocks

FEATURES

• Modularity:
Fixed and Pluggable PCB Terminals are available in both metric and inch pin spacings. The key feature of our modular terminal housings is their tongue and groove joint design that permits individual 2 or 3 pole terminal modules to be joined together to produce multi-pole terminal assemblies.

• Housings:
PCB Mini-Terminal Block housings are precision molded from self-extinguishing 6.6 polyimide (nylon) molding material. All housings have funnel shaped wire entry guides to prevent wire fraying and minimize misconnections.

PIDG Ring Terminals

PIDG (Pre-Insulated Diamond Grip) Terminals: Meet or exceed the requirements of MIL-T-7928, Type II, Class 1 and 2. **Product Facts:** • **Temperature Rating:** 105°C Max. • **AMP Wire:** Solid or Stranded • **Terminal Material:** The basic terminal is conducted of fine grade high conductivity copper per ASTM B-152 and tin-plated per MIL-T-10727. Basic material for Spring Spade Tongue Terminals is phosphor bronze per ASTM B-139 and tin-plated per MIL-T-10727. AMP's special plating process creates durable corrosion resistance to salt spray and most chemical fumes. • **Copper Sleeve:** The specially designed copper sleeve, fitted over the terminal barrel, provides circumferential insulation support to the wire and allows the wire to be bent in any direction, without fraying the wire's insulation or breaking the conductor. • **Nylon Insulation (unless otherwise noted):** Nylon sleeve assures high dielectric strength.

PIDG Insulation Restricting Terminals: **Material:** • Insulation: Nylon • Terminal Body and Metallic Sleeve: Copper per ASTM B-152 • Plating: Nickel per QQ-N-290 or Tin per MIL-T-10727. Insulation Restriction Terminals prevent the insulation of thin-wall insulation wire from entering the terminal's wire crimp area during the crimping process.

PIDG Radiation Resistant: **Temp. Rating:** 150°C Max. **Material:** • Insulation: Polyvinylidene Fluoride (PVF_2) • Terminal, Splice Body & Metallic Sleeve: Copper per ASTM B-152 • Plating: Tin per MIL-T-10727.

PIDG Spade Terminals

PIDG (Pre-Insulated Diamond Grip) Terminals: Meet or exceed the requirements of MIL-T-7928, Type II, Class 1 and 2. **Product Facts: • Temperature Rating:** 105°C Max. **• AMP Wire:** Solid or Stranded **• Terminal Material:** The basic terminal is conducted of fine grade high conductivity copper per ASTM B-152 and tin-plated per MIL-T-10727. Basic material for Spring Spade Tongue Terminals is phosphor bronze per ASTM B-139 and tin-plated per MIL-T-10727. AMP's special plating process creates durable corrosion resistance to salt spray and most chemical fumes. **• Copper Sleeve:** The specially designed copper sleeve, fitted over the terminal barrel, provides circumferential insulation support to the wire and allows the wire to be bent in any direction, without fraying the wire's insulation or breaking the conductor. **• Nylon Insulation (unless otherwise noted):** Nylon sleeve assures high dielectric strength.

PIDG Knife Disconnect & Butt Splices

PIDG (Pre-Insulated Diamond Grip) Terminals: Meet or exceed the requirements of MIL-T-7928, Type II, Class 1 and 2. **Product Facts:** • **Temperature Rating:** 105°C Max. • **AMP Wire:** Solid or Stranded • **Terminal Material:** The basic terminal is conducted of fine grade high conductivity copper per ASTM B-152 and tin-plated per MIL-T-10727. Basic material for Spring Spade Tongue Terminals is phosphor bronze per ASTM B-139 and tin-plated per MIL-T-10727. AMP's special plating process creates durable corrosion resistance to salt spray and most chemical fumes. • **Copper Sleeve:** The specially designed copper sleeve, fitted over the terminal barrel, provides circumferential insulation support to the wire and allows the wire to be bent in any direction, without fraying the wire's insulation or breaking the conductor. • **Nylon Insulation (unless otherwise noted):** Nylon sleeve assures high dielectric strength.

PIDG - Spare Wire Caps: **Material:** Copper Tin Plated, Insulation: Nylon

PIDG - Butt Splice Step Down Adapter Inserts: **Material:** • Adapter Body: Copper per ASTM B-152 • Plating: Zinc/DyeChromate
